

## How to Upgrade to DRM-X 5.0?

We invite all existing customers, including DRM-X 3.0 and DRM-X 4.0 customers, to upgrade to the DRM-X 5.0 platform, because DRM-X 5.0 is more secure, more stable, and easier for customers to use.

DRM-X 5.0 is a major upgrade. If you want to upgrade to DRM-X 5.0, you need to register a DRM-X 5.0 account and re-encrypt all files through ZJGet Browser. Please refer to the [DRM-X 5.0 Tutorial](#).

### Step 1:

Please first watch the [DRM-X 5.0 demo tutorial](#) and [register a DRM-X 5.0 account](#).

### Step 2:

For license rights, license profile, and user groups, you must manually recreate them in your DRM-X 5.0 account. Before creating license profile, please create the license rights first, because you need to select the default license rights when creating a license profile. After that, create the user groups, because when creating a user group, you need to choose which license profile the group is allowed to access.

### Step 3:

Create or import end users.

For end users account, you can create user accounts in the DRM-X 5.0 admin panel. If you have a large number of end users in the DRM-X 4.0 admin panel, you can export the user CSV file from **DRM-X 4.0 Account Settings -> Export User CSV File**. Then import the CSV file through **DRM-X 5.0 Account Settings -> Import User CSV File**.

You should first create the user groups, then select the correct user group when exporting and importing. Please make sure the users being imported do not already exist in DRM-X 5.0. You may delete all existing users in DRM-X 5.0 before importing the users.

**Note:** If you are using custom login integration, you do not need to re-import users. After you correctly modify the integration code, users will be automatically added to DRM-X 5.0 when they obtain a license.

### Step 4:

Use [ZJGet Browser](#) to access the [Protect Files](#) page and encrypt your files.

### Step 5:

If you have website integration, please update the integration code.

If your website is integrated with DRM-X, you also need to update the integration code. If you still want to continue using DRM-X 4.0, you can make a copy of the integration code and create a new file. This way, you can use DRM-X 4.0 and DRM-X 5.0 at the same time within one year. After your users have been migrated to DRM-X 5.0, you may suspend the DRM-X 4.0 account service.

#### **Integration Code Update Guide:**

1. Modify the integrated web service interface URL  
International version: <http://5.drm-x.com/haihaisoftlicenseservice.asmx?wsdl>  
China version: <http://5.drm-x.cn/haihaisoftlicenseservice.asmx?wsdl>
2. Modify the values of parameters such as **AdminEmail**, **WebServiceAuthStr**, **GroupID**, and **RightsID** in your integration code according to the data in your DRM-X 5.0 account backend.
3. If your integration code uses the **UpdateRight** interface method, you need to add the new parameters introduced in DRM-X 5.0 rights settings, including the second watermark, third watermark, and the new security features. Please refer to the [UpdateRight](#) interface method for detailed parameters.
4. The name of the DRM-X 5.0 license storage page has been changed from **licstore** to **licstore5**.

If you have any questions about how to upgrade your integration code, please contact us. We will help you check and ensure that the integration code upgrade is correct. [Contact us](#).

**Step 6:** Publish your protected files and [ZJGet Browser](#).

After you complete these settings, you can allow your users to download DRM-X 5.0 protected files and have them install ZJGet Browser. DRM-X 5.0 provides more secure protection for your premium content, and ZJGet Browser offers a better user experience, especially for online playback.
