EXPERT SUPPORT FROM HAIHAISOFT ....................................15
OVERVIEW

After custom login page integration, your users just need to register and login on your own website. It will pop up your website DRM login window when the user opens your protected content.

For the integration, you need to create a new login page or modify your existed login page. It requires some code work. But don’t worry, very simple.

All that you need to do is to call the `getLicenseRemoteToTable` function. You can get the details about DRM-X Web Service by the link: `http://3.drm-x.com/haihaisoftLicenseservice.asmx`

What necessary before integration?

1. DRM-X Account
   You need to have one of the DRM-X Accounts including Premier / Business Windows / Business Pro / Enterprise before you integrate with your platform. DRM-X Basic Account users can manage its users on DRM-X.com instead.

   Click the link below to see the DRM-X Account Comparison.
   `http://www.drm-x.com/Fees-Compare-3.0.aspx`

2. User database, login page and register page.
   You should setup a database that can store your users’ information if you want to integrate with DRM-X platform. You also need to create user login page and register page for your users to login and register.
Parameter Introduction

The parameter in blue color is required field. You can set the others into ‘N/A’ (means empty) or enter the correct value.

- **AdminEmail**: your login Email of DRM-X Account.
- **WebServiceAuthStr**: the Web Service Authenticate String for DRM-X web service. The value you set here must be the same with the one on your DRM-X account.

Steps to setup:
1. Login your **DRM-X 3.0 account**.
2. Click the **Account Settings** in the left panel and choose the **Website Integration Preferences**, as shown in the screenshot below:
3. Select **Custom login page integration** and enter the **Web Service Authenticate String.** As shown in the screenshot below:

4. Click the **Submit** button below and you will get the message shown on the picture below:
- **GroupID:** the ID of your Group created in your DRM-X account. You can find GroupID value in Users Group of DRM-X Account.

Note: in the code you just need to enter one Group ID, and the users signed up on your website will be added into group directly. You can manually change the group they belong to in your DRM-X account if you want.

- **UserLoginName:** the username or unique UserID in your user database.
- **UserFullName:** the Full Name of User. This parameter is option. You can leave this UserFullName parameter to blank, or just set it value to N/A.
- **ProfileID:** the ID of the profile you create on DRM-X. DRM-X provides this parameter.
- **ClientInfo:** the basic client information of your users. DRM-X provides this parameter.
- **RightsID:** the ID of rights that you created in your DRM-X Accounts. DRM-X provides this parameter.
- **IP**: address of your user which acquire license. You can provide this Parameter, or input N/A.

- **Platform**: the operating system of end user, DRM-X will return value: Windows XP, Windows Vista, Windows 7, Mac or Android.

- **ContentType**: the type of protected content, DRM-X will return Audio/Video or PDF.

- **yourproductid**: the ProductID in your system, please set it in License Profile.

- **Version**: Get HUPlayer/HPReader version.

## Download Sample Code

You can download the sample pages by clicking the link below:

http://www.drm-x.com/download/sample_code_3.0/Custom_Login_Page_Integration_ASP.zip

## Step by Step Introduction

### Step1: Create drmlogin.asp

Create Custom login page which is the User login customized windows when users open your protected content. It is used to recognize legal user information. We name this page is **drmlogin.asp** in sample code.

Set cookies to store the value of Profileid, Clientinfo, Platform, ContentType. Shown the sample code below:

```asp
<%
Session("profileid") = Request.Form("profileid")
%>
```

**Customize Login Page Integration (ASP Guide)** - 7 -
Step2: Create check.asp

This page is used to verify users’ correct username and password.
Here we write a permission user: testuser, test. (You can edit verification method according to your requirements.)

Shown the sample code below:

```asp
<%
    dim sql,rs
    dim username,userkey,strErr
    username=replace(trim(request.Form("username")),"","")
pwd=replace(trim(request.Form("pwd")),"","")
    if username="" then
        FoundErr=True
        strErr=strErr & "<br><li> Can't be empty!</li>"
    end if
    if pwd="" then
        FoundErr=True
        strErr=strErr & "<br><li> Can't be empty!</li>"
    end if
    if FoundErr<>True then
        username=replace(trim(request.Form("username")),"","")
pwd=replace(trim(request.Form("pwd")),"","")
        if (pwd<>"test") or (username<>"testuser") then
            FoundErr=True
            strErr=strErr & "<br><li> username or password not correct!</li>"
        else
            session("username")= "testuser"
            Response.Redirect("licstore.asp")
        end if
    end if
    if FoundErr=True then
        strErr=strErr & "<br><li><a href='drmlogin.asp'> >onClick here login!</a></li>"
%>
```
Step3: Create licstore.asp

Please create a new page named licstore.asp to call the getLicenseRemoteToTable function, if your DRM-X 3.0 account is Enhanced Security Mode (check account Mode), you need call the getLicenseRemoteToTableWithVersion function. And then add the code below on the page:

```asp
<% 
If session("username") = "" Then 
    Response.Write("<font color=red><center>Login failed!</center></font>")
    Response.End()
End If
Dim AdminEmail, WebServiceAuthStr, ProfileID, Clientinfo, RightsID, UserLoginName, UserFullName, GroupID, Message, IP, LicenseValue
AdminEmail = "support5@haihaisoft.com"
WebServiceAuthStr = "123456drm"
ProfileID = session("profileid")
Clientinfo = session("clientinfo")
RightsID = "390"
UserLoginName = session("username")
UserFullName = "N/A"
GroupID = "267"
Message = ""
IP = "N/A"
Platform = session("Platform")
ContentType = session("ContentType")
Response.Write getLicenseRemoteToTable(AdminEmail, WebServiceAuthStr, ProfileID, Clientinfo, RightsID, UserLoginName, UserFullName, GroupID, Message, IP, Platform, ContentType)
Function getLicenseRemoteToTable(AdminEmail, WebServiceAuthStr, ProfileID, Clientinfo, RightsID, UserLoginName, UserFullName, GroupID, Message, IP, Platform, ContentType)
Dim soapClient
Set soapClient = Server.CreateObject("MSSOAP.SoapClient30")
soapClient.ClientProperty("ServerHTTPRequest") = True
soapClient.msoapinit "http://3.drm-x.com/aihaisoftlicenseservice.asmx?wsdl"
getLicense = soapClient.getLicenseRemoteToTable(AdminEmail, WebServiceAuthStr, ProfileID, Clientinfo, RightsID, UserLoginName, UserFullName, GroupID, Message, IP, Platform, ContentType)
```
Step4: Set DRM-X Website Integration Parameters

So it will pop up the default.aspx when your users play your protected files. You can customize the page whatever you need.

Steps to set:

1. Login your [DRM-X account](#).
2. Click the **Account Settings** in the left panel and choose the **Website Integration Preferences**, as shown in the screenshot below:
3. Select **Custom login page integration** and, enter the URL of your customized page. As shown in the screenshot below:
4. Click the **Submit** button below and you will get the message shown on the picture below:

![Profile - Website Integration Preferences](image)

**Step5: Integration Error Messages**

When you integrate DRM-X 3.0 with your website, it may return some error messages. You should write code check the returned error messages and displays the error messages properly to end users. It will help you and your users identify the error easily. For example: Exceed Bind Number, License Profile doesn't exists, User Group doesn’t exists, License Rights doesn’t exists and Rights Expired.

1. Content Provider has insufficient funds in DRM-X 3.0 platform.
   - Message = "Your remain fund is not enough to pay monthly fee. Please add fund to your DRM-X account. For more information, please visit:  http://www.drm-x.com"
   - License Return "ERROR:ADMIN_NO_MONEY"

2. The Rights have expired, the expiration date is less than the current date.
   - Message = "ERROR:RIGHTS EXPIRED"
   - License Return "No License"

3. The Rights have not begin, the begin date is greater than the current date.
   - Message = "ERROR:RIGHTS EXPIRED"
   - License Return "No License"

4. Exceeded hardware combined number
Message = "Sorry, you can only acquire license in " & AllowBindNum & " computers. Please contact your content owner for details."
License Return "ERROR:EXCEED_BIND"

5. Common Returned Message
Message = "Webmaster doesn't have the User Group or you don't have permission to access this User Group. Please contact your webmaster for details."
Content provider doesn’t have this user group, or you don’t have permission to access to this User Group.

Message = "Webmaster doesn't have this Rights or you don't have permission to acquire this rights. Please contact your webmaster for details."
Content owner doesn’t have this License Rights, or you don’t have permission to acquire this Rights.

Message = "Webmaster hasn't encrypt this file or you don't have permission to acquire license. Please contact your webmaster for details."
Content owner hasn’t encrypted this file (The License Profile does not exist ), or you don’t have permission to acquire this License Profile.

If Message return these information, License will return "".

Message Return ""
License Return "Your XML web service login info is not correct. Please check your AdminEmail and WebServiceAuthStr settings."
Integration Parameter AdminEmail and WebServiceAuthStr settings are wrong.
Step 6: Open your contents protected by DRM-X
